Education

- 15.8 - 20.7 **The Chinese University of Hong Kong (CUHK)** Shatin, Hong Kong
Ph.D., Computer Science and Engineering
◦ Supervisor: Prof. James Cheng
- 11.9 - 15.6 **Huazhong University of Science and Technology (HUST)** Wuhan, China
B.Eng., Computer Science and Technology
Overall GPA: 3.88 / 4.00 Rank: 1/ 30/ 472 (in a 30-student Honor Class)

Research Interests

My general research interests cover the broad area of distributed systems and databases, with special emphasis on distributed graph systems and distributed machine learning/deep learning systems. My current works focus on RDMA based OLAP/OLTP systems over graphs, graph databases, distributed Graph Neural Network systems.

Work Experiences

- 20.7 - present **ByteDance Inc.**, *Graph Computing and Storage, Infrastructure Group* Beijing, China
◦ **Senior R.D.**, System Design and Implementation of ByteGraph.
ByteGraph is ByteDance's company-level Distributed Graph Database.
- 19.2 - 19.8 **Huawei, 2012 Lab**, *Parallel and Distributed Computing Laboratory* Shenzhen, China
◦ **Researcher**, System Design for the **MindSpore** project.
MindSpore is a self-proposed Distributed Deep Learning Platform by Huawei, 2012 Lab.

Academic Experiences

- 17.05 - 17.08 **University of Pennsylvania**, *NetDB Lab, Dept. CIS* P.A., U.S.A.
◦ **Visiting Scholar**, Distributed Graph Query Optimizations.
Supervisor: **Prof. Boon Thau Loo**.
- 15.09 - 20.07 **The Chinese University of Hong Kong**, *HDL Lab, Dept. CSE* Hong Kong
◦ **Research Assistant**, Distributed Systems for Large Scale Data Analytics.
Supervisor: **Prof. James Cheng**.
- 14.06 - 15.05 **Microsoft Research Asia**, *Software Analytics Group* Beijing, China
◦ **Research Intern**, Large-scale Data Analytics, Distributed Systems.
Supervisor: **Qingwei Lin** (Lead Researcher) and **Dr. Jianguang Lou** (Principle Researcher).
- 13.09 - 14.06 **HUST, IDC Lab**, *Dept. CSE* Wuhan, China
◦ **Research Intern**, System Optimizations on Hadoop.
Supervisor: **Prof. Ruixuan Li**

Projects during my PhD and Undergraduate Study

My research focuses on the design and implementation of distributed systems and their applications. I have led or participated as the core developer of the following projects.

-
- Grasper An RDMA-enabled high performance OLAP system over property graphs with good scalability. We proposed a novel execution engine, called Expert Model, to provide tailored optimizations with adaptive parallelism control for query operators. Grasper achieves order of magnitudes performance improvements over existing systems (e.g., Titan, JanusGraph, OrientDB, Neo4j).
 - PGE A representation learning framework for property graph embedding. The key idea of PGE is a three-step framework to leverage both the topology and property information into Graph Neural Networks for a better node embedding result.
 - G-Miner A distributed graph processing system aimed at general graph mining problems, which have intensive local computation inside a subgraph. We modeled each subgraph processing as a task and designed a task-based pipeline to improve the parallelism between computation and communication. A dynamic task stealing mechanism as well as an efficient cache strategy were also proposed to further speed up the task processing.
 - G-thinker Real applications, such as graph matching and community detection, often require computation intensive graph analytics, which cannot be represented by vertex-centric algorithms for efficient execution in systems like Pregel and GraphLab. We proposed G-thinker, a new subgraph-centric general graph processing distributed system, which is natural for subgraph finding problem.
 - PPA-assembly A scalable toolkit for de novo genome assembly was developed based on Pregel. PPA-Assembly provides a set of key operations in genome assembly, which were implemented by practical Pregel algorithms (PPAs) with strong performance guarantees.
 - GraphD It offers out-of-core support for processing very big graphs in a small cluster of commodity PCs, with performance comparable with the state-of-the-art distributed in-memory graph systems.
 - LWCP A fault tolerance mechanism for Pregel-like systems with performance tens of times faster than the conventional checkpointing mechanisms.
 - FPMS A novel and general distributed framework to mine frequent patterns, including frequent item-sets/sequences/graphs.

I also joined in some other research projects during my work at CUHK, UPenn and MSRA.

-
- GraphRex An efficient framework for graph processing on datacenter infrastructure. The key technical contribution of GraphRex is the identification and optimization of a set of global operators whose efficient implementation is crucial to the good performance of large, datacenter-based graph analysis.
 - RANGE-LSH Using maximum inner product for similarity search, which significantly outperforms SIMPLE-LSH. RANGE-LSH is robust to the shape of 2-norm distribution and different partitioning methods.
 - Pregel+ An open-source Pregel implementation with optimizations to reduce communication cost and eliminate skewness in communication.
 - More If you are also interested in my previous works at **MSRA, Software Analytics Group**, please visit my homepage for more details. My works at MSRA focused more on distributed data analytics, including OLAP, pattern mining, text clustering and anomaly detection. I participated in 4 projects as a core developer, i.e. *Service-Intelligence*, *Service-Insider*, *iDice* and *In4*. In particular, both **Service-Intelligence** and **iDice** have been published in **ICSE'16**, and **In4** has been published in **KDD'18**.

Awards & Honors

2019.11 SoCC'19 Travel Award

- 2019.5 SIGMOD'19 Travel Award
- 2018.4 EuroSys'18 Travel Award
- 2016 - 2020 CUHK Postgraduate Studentship.
- 2015.6 The original winner of **Hong Kong PhD Fellowship**.
- 2015.6 **“Stars of Tomorrow” at Microsoft Research Asia** (Only 15% research interns won the Award)
- 2015.6 Outstanding Graduates (3% in HUST)
- 2014.10 CCF (China Computer Federation) National **Top 100** Outstanding Undergraduates (**Top 0.1%**)
- 2014.9 Academic Excellence Scholarship (2% in HUST)
- 2014.9 Merit Undergraduate (2% in HUST)
- 2013.9 National Undergraduate Scholarship (2% in HUST)
- 2013.9 Merit Undergraduate (2% in HUST)
- 2012.9 Most Outstanding Undergraduate (1% in HUST)
- 2012.9 Academic Excellence Scholarship (2% in HUST)

Teaching

- Spring, 2020 CSCI5120: Advanced Topics in Database Systems
- Spring, 2018 CSCI1020: Hands-on Introduction to C++
- Fall, 2017 ENGG1110: Problem Solving By Programming
- Spring, 2017 ENGG1110: Problem Solving By Programming
- Fall, 2016 ENGG1110: Problem Solving By Programming
